

Immediate Transitions: There are no immediate transitions & as such no **Vanishing States**, so the extended Reachability graph = Reduced RGR & would be ready to generate the Generator Matrix to be discretized

State Space: $\{S_0, S_1\}$

* $S_0: (1, 0)$ Token in place. S_0 is active
 * $S_1: (0, 1)$ Token in place. S_1 is active

Generator Matrix

$$\begin{matrix} & \begin{matrix} S_0 & S_1 \end{matrix} \\ \begin{matrix} S_0 \\ S_1 \end{matrix} & \begin{bmatrix} -1/7 & 1/7 \\ 1/10 & -1/10 \end{bmatrix} \end{matrix}$$
